

TECHNOLOGY LEAD

System Architecture & Platform Development

JAG Global Network • Position Description • February 2026

PURPOSE OF THIS ROLE

The Technology Lead is the technical backbone of the JAG Global Ecosystem. This person is responsible for building, deploying, and maintaining all digital infrastructure — from websites and automation systems to AI integrations and blockchain verification tools.

This is a ground-floor opportunity to architect the technology layer of a global consciousness education platform. The entire ecosystem — 19 interconnected spheres serving over 1 billion lives — depends on a functional technology layer. Without this role, the architecture cannot operate.

CORE RESPONSIBILITIES

1. Website Development & Deployment

- Build and launch the JAG Universe website ecosystem (WordPress-based)
- Deploy individual sites for JAG Program, True Divine Series, JAG Academy, Sacred Union, and supporting entities
- Ensure mobile responsiveness, fast load times, and professional design aligned with JAG Design System
- Implement e-commerce functionality for book sales and program enrollment

2. Automation & AI Systems

- Set up and manage Make.com automation workflows (the ecosystem's nervous system)
- Integrate Claude API as the core intelligence layer for content and operations
- Build the JAG AI Global Command Center and LUMEN OS operational framework
- Deploy ElevenLabs voice synthesis for audio content production

3. Platform Infrastructure

- Set up and maintain Notion as mission control and project management hub
- Deploy Buffer (social media), ConvertKit (email marketing), and CRM systems
- Implement Genesis Ledger blockchain verification system for IP protection
- Manage hosting, domains, SSL certificates, and server security

4. Publishing Technology

- Set up book formatting and publishing workflows (Amazon KDP, IngramSpark)
- Configure digital delivery systems for ebooks, audiobooks, and digital courses
- Support crowdfunding platform integrations

REQUIRED SKILLS

- WordPress development (themes, plugins, custom builds)
- HTML/CSS/JavaScript proficiency
- Experience with API integrations and webhook-based automation
- Familiarity with Make.com, Zapier, or similar automation platforms
- Understanding of hosting environments, DNS, and server management
- Basic understanding of AI tools and language model APIs

HELPFUL BUT NOT REQUIRED

- Experience with blockchain or decentralized verification systems
- Knowledge of Amazon KDP and self-publishing platforms
- Background in education technology or LMS platforms
- Experience with ElevenLabs, Claude API, or similar AI tools
- Familiarity with Notion, Buffer, ConvertKit ecosystems

COMPENSATION

Initial Phase (Pre-funding)

- Volunteer, equity-based, or project-based compensation
- Founding team status with significant equity stake
- Flexible schedule — estimated 15–30 hours/week initially

Post-funding

- Competitive salary commensurate with experience
- Performance bonuses tied to platform milestones
- Equity participation in JAG Global Corporation
