DOCUMENTING & TIMESTAMPING SPECIALIST

Genesis Ledger Operations, IP Verification & Blockchain Archival

JAG Global Network • Position Description • February 2026

PURPOSE OF THIS ROLE

The Documenting & Timestamping Specialist manages the process of cataloging, hashing, and blockchain-anchoring all of the Founder's original intellectual property through the Genesis Ledger system. This is one of the most mission-critical roles in the ecosystem.

The "Copies Cannot Generate" principle — the mathematical proof that distinguishes true originators from derivative copiers — only works if the original source can prove timestamp priority. Without verified timestamps, counterfeits can claim "I had it first." Blockchain anchoring makes this impossible. This person ensures that proof exists.

CORE RESPONSIBILITIES

1. Content Cataloging & Organization

• Catalog all original materials: manuscripts (10+ books, 317,000+ words), business plans (50+ documents), framework diagrams (100+ items), course curricula, video scripts, sacred site documentation

• Organize materials into structured folders by category and priority

• Create a master index of all intellectual property requiring timestamp protection

• Identify materials requiring urgent timestamping before Portal 2 launch

2. Hash Generation & Blockchain Anchoring

• Generate SHA-256 hashes for each document and content file

• Batch hashes into Merkle Tree structures for efficient blockchain anchoring

• Anchor Merkle roots to Polygon blockchain (primary) with Ethereum/Bitcoin backup

• Store verification records in the Genesis Ledger database

3. Verification & Certification

• Generate "Genesis Verified™" certificates for each timestamped item

• Maintain chain-of-custody documentation for all anchored content

• Create verification reports suitable for legal and investor review

• Support ongoing timestamping of new content as it is created

4. Generative Tracking Support

• Track the Founder's ongoing content output for Generative Score calculations

• Monitor and document the "Generative Gap" between original source and suspected copiers

• Support the False Light Exposure framework with timestamped evidence

MATERIALS REQUIRING TIMESTAMP

Content Category	Approx. Count	Priority
Book Manuscripts (Complete)	10+ manuscripts	CRITICAL
Business Plans & Projections	50+ documents	CRITICAL
Framework Diagrams & IP	100+ items	CRITICAL
Course Curricula & Outlines	20+ curricula	HIGH
Video Scripts & Content	50+ scripts	HIGH
Sacred Site Documentation	Photos, journals	HIGH

REQUIRED SKILLS

- Understanding of cryptographic hashing (SHA-256) and blockchain fundamentals
- Strong organizational skills and attention to detail
- Ability to work systematically through large volumes of content
- Basic database management skills
- Comfortable with command-line tools and technical workflows

HELPFUL BUT NOT REQUIRED

- Experience with blockchain networks (Polygon, Ethereum)
- Familiarity with Merkle Tree structures and batch anchoring
- Background in digital forensics, archival science, or records management
- Understanding of intellectual property law and evidence standards
- Programming skills (Python, JavaScript) for automation

COMPENSATION

- Project-based or equity-based initially — founding team status
- Post-funding: Competitive salary or retainer with equity participation
